

CyberSafety Workshop

27th & 28th October 2022

A **Cyber Security Awareness seminar** was conducted on the 27th and 28th October, 2022 for students of classes V-XII by Mr. Samson George, Director, Technology Risk Partners a UK based IT Consulting firm.

The workshop gave students a valuable insight into the hidden dangers of the cyberworld. They were made aware of the threats posed to them while surfing the internet and using various social media applications. Students learnt that in today's digital age it is imperative to be vigilant.

From fake websites to impersonation, phishing attacks and data breach, children, being susceptible to such threats, must understand the importance of thinking before engaging with strangers online.

The session was interactive and impactful with students actively taking part in the quizzing process and sharing their online experiences.
